

Managed SD-WAN with Meraki

Computacenter transforms the customer WAN through Advisory, Design, Sourcing & Deployment services, with in-life Management, delivered as an end-to-end suite. The advantages for our customers are:

- **Confidence** - Computacenter worry about the network delivery, allowing the customer to better focus on their business outcomes
- **Hybrid Cloud** - flexible and secure connection options
- **Data Analytics** - providing network visibility with the ability to quickly react and drive change
- **Security** - secure access to the right data from any device, at any time, and from any location
- **Compliance** - security for the entire digital fabric with no performance degradation
- **Flexibility** - vary performance and security requirements across applications, users, and locations

A Managed SD-WAN service from Computacenter makes your network transformation as seamless as possible, freeing up valuable resources to focus on projects that drive your business value.

With a growing number of applications moving to the cloud, getting the right data to the right places – fast – is now more important than ever. Complex routing and hybrid application architectures means the traditional WAN simply isn't fit for purpose any longer. All businesses face the challenge of adapting networks quickly, to meet ever changing demands for remote working, application distribution and cloud migration.

Software-Defined Wide Area Network (SD-WAN) technology gives you the flexibility to make the most of the array of options available. This increases your efficiency and performance, and in the longer term, provides you with a reduction in connectivity costs. Delivering reliable and consistent connectivity to the office, the home or independent location is key to driving a positive digital experience for your employees. When it comes to cloud connectivity, SD-WAN delivers the same benefits, allowing you to leverage a single platform for all your connectivity needs.

Software-defined networks change the way we think about planning, deployment, and operation of networks to best meet your business needs.

The Computacenter approach

Our Managed SD-WAN service is an end-to-end service which delivers the transformation of the customer WAN. Providing expert navigation through the complex journey of advisory, design, source, transform and manage, we bring your network to a new level, unleashing the full potential of that investment.

With Cisco Meraki SD-WAN as the underlying technology, we are able to offer you the highest possible level of performance for critical applications, all without sacrificing security or data privacy.

The Meraki way of doing SD-WAN is the latest approach to network connectivity that lowers operational costs and improves resource usage for multi-site deployments to use bandwidth more efficiently.

Why Managed Services by Computacenter?

Being the leader in end-user support we naturally understand what is needed to keep businesses running optimally and deliver the best possible user experience. We have built our managed network services putting the user first, leveraging our vast expertise around modern workplace environments, to provide an unparalleled service outcome.

Managed SD-WAN is seamlessly embedded into Computacenter's wider managed services portfolio, which addresses all of your requirements around Workplace, Security, Cloud & Data Center, and Networking. This makes us the preferred partner for customers who demand a world-class service across multiple IT disciplines, delivering reduced complexity and cost, as well as removing the need to manage multiple suppliers.

We have an unrivaled global reach and end-to-end capability, providing IT Strategy and Advisory Services, Technology Sourcing, Maintenance, Transformation Services, and Managed Services. Our extensive skills and resources adapt quickly to customer demand, with over 800 skilled network engineers to rely on.

Our customers trust us to manage over 110,000 of their network devices from our delivery centers on-shore, near-shore, and off-shore.

Our proven IT Service and Operations management framework, together with our highly skilled and accredited people, provides a unique global presence, delivering industry-leading capability. Computacenter's solutions in network automation and software-defined services have been recognized as leaders by independent analyst ISG several times, most recently in 2023.

About Computacenter

Computacenter is a leading independent technology and services provider, trusted by large corporate and public sector organisations. We help our customers to source, transform, and manage their IT infrastructure to deliver digital transformation, enabling users and their business. Computacenter is a public company quoted on the London FTSE 250 (CCC.L) and employs over 20,000 people worldwide.

Leader – 7 years running!

We have been working with Software Defined Networking technologies since 2012 and our SDN expertise has been repeatedly recognised as a leader by ISG.

“Computacenter has a strong track record in guiding midsize to large enterprises through their Digital Transformation journey with a holistic view including a state-of-the-art SD network as a key enabler for the whole journey.”

Dr. Christian Weber
Principal Consultant at ISG
