COMPUTACENTER DESIGNS AND DEPLOYS GLOBAL VXRAIL PROGRAM FOR LAWFIRM

OBJECTIVE:

Computacenter assisted a law firm in their 18 location global deployment of VxRail, Cohesity and Cisco. The solution was designed to support the customer's remote branch technical refresh initiative utilizing a novel approach to building and integrating the equipment prior to delivery and final configuration at the destination. The equipment was kitted and assembled through Computacenter's Livermore Integration Center where customer approved configurations were applied. The overall system was subjected to stringent validation testing and once completed, the components were re-labeled and repacked for shipment to all sites.

SOLUTION:

Technical Design

- Site checklists and pre-deployment requirements
- RDD (Rack Design Documentation) and build network environment for IC integration
- Create test and acceptance criteria and incorporate automation advanced integration concepts

Integration Center

- Integrate VxRail solution to customer specifications and perform pre-agreed testing procedures
- Update code and run fully automated inventory and status checks
- Pack and ship

Remote Installation

- In coordination with onsite engineers, we performed final rack deployment and network integration
- The next step was to integrate the system with the customer's external vCenter server and finalize all documentation

OUTCOME:

- Predictable cost model for future remote offices deployments with reduction in capital and operational overhead associated with their technical refresh initiatives.
- Reduced overall time to deployment along with increased quality and customer satisfaction
